PURIFIED
DRINKING WATER

H₂Only Oasisbar

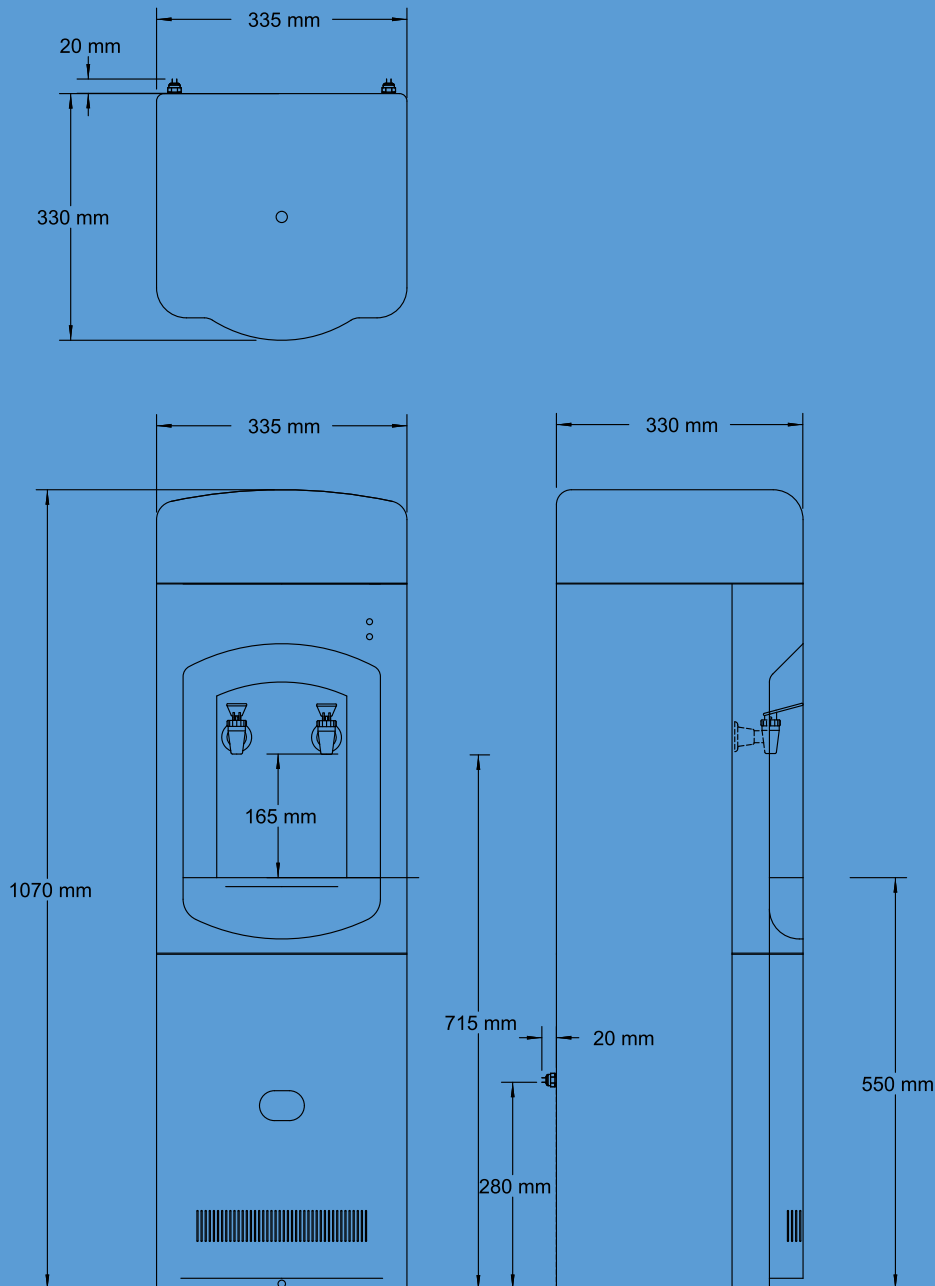

The H₂Only Oasisbar™ is a stylish, free standing water cooler providing a constant supply of healthy and great tasting drinking water for staff and customers. The Oasisbar™ is plumbed directly into the mains water system and never needs manual refilling or loading of heavy bottles.

The H₂Only Oasisbar™ uses the latest water filtration technology to remove impurities from the water including those which cause bad taste and unpleasant colour and odour. The H₂Only Oasisbar™ provides great tasting,

bottle quality water at a fraction of the cost of bottled water solutions. In addition to the significant cost savings there is no need to store and lift heavy bottles of water providing customers with obvious health and safety benefits for staff.

The Oasisbar™ can be located up to 60m from the mains water supply and is connected by discreet 6mm flexible piping which can be run through cavity ceilings, walls or floors. All equipment is professionally installed by qualified H₂Only installers.

The Oasisbar™ is available as either a floor standing or benchtop unit and can be supplied with cold and room temperature water or cold and hot water. H₂Only can supply an Oasisbar™ on a rental or purchase basis.

H₂Only rental equipment is fully guaranteed for the duration of the rental agreement and includes scheduled servicing every six months by the H₂Only service team. Rental equipment can be relocated by qualified H₂Only staff free of charge once during the term of the rental agreement.
